CAP SERVICES

Community Needs Assessment 2025 Survey Results

Executive Summary

Completed February 2025

CAP Services (CAP) conducted a household needs survey in Fall 2024 as part of a triennial community needs assessment. More information is available at www.capservices.org/cna/. CAP printed and distributed 2,250 surveys to individuals with lower incomes, of which 298 surveys (13.2%) were returned. CAP also circulated an identical online survey via CAP staff, partners, website, and social media. Individuals could go directly to the website or use the QR code to complete the survey. The QR code scanned 144 times, with 138 unique scans (1st time users).

After reviewing the data, CAP included 412 surveys in the results from respondents at or below 200% Federal Poverty Level in Portage, Waushara, Marquette, Waupaca, and Outagamie counties. The analyst calculated and ranked each issue on the survey (see Issues Ranked). For the statistical sample (n=412), responses were relatively similar. The most pressing issues were directly related to finances. Throughout the sample groups, "Lack of Savings" ranked the number 1 issue.

How were samples determined?

CAP obtained 451 survey responses, including both online and paper responses.
All analysis was done using Microsoft Excel.

How were issues scored and ranked?

As part of the survey, respondents were asked to classify a series of issues based on the perceived severity of said issue for their household. A Likert style scale was presented with a range from 0 (Not a problem) to 4 (Very serious problem). The analyst averaged the scores of each of this style question, producing a mean issue score.

Likert style questions are ordinal (categorical) data. This type of data does not have equal intervals between each possible response. While mean, a measure of central tendency, would not typically be used to analyze Likert data it was used in this case to account for both the small sample size and the fact that the number of responses varies from question to question.

The analyst took the average sum of each question and responses and calculated a weighted sum average for each question from the results.

Who was left out of this analysis?

Responses from individuals located outside of the counties that CAP works in (Portage, Outagamie, Waushara, Waupaca, Marquette) were removed as they were outside the target demographic that CAP supports. This removed 14 responses, or 3.1% of initial responses.

Survey responses from individuals with income 200% FPL were also removed, as they were also outside the target demographic of individuals supported by CAP. This totaled 25 responses, or 5.5% of initial responses.

412 responses or 91.4% of responses remained.

There were six cases of individuals submitting multiple responses under the same name and address, but as the answers varied widely enough to likely be a different member of the household, they were included.

When interpreting data for future steps, we highly recommend use of 412 as the number equaling 100% of respondents. We encourage basing interpretations and future steps on this total count of 412 responses.

Of these overall respondents, 62% were under age 55, 36% lived in households with children under 5, 48% lived in households with disabilities, and almost 81% were female.

Results by Race and Ethnicity

Responses for all races and ethnicities are included within each table. However, the sample pool (n=412) is too small to include a separate subset table for each race or ethnicity.

By ethnicity, 42 respondents (10.19%) identified their ethnicity as 'Hispanic, Latino, or Spanish Origins', 345 respondents (83.74%) identified as 'not Hispanic, Latino, or Spanish Origins', and 25 respondents (6.01%) chose not to respond.

By race, 24 (5.83%) identify as American Indian or Alaska Native, 34 (8.25%) identify as Asian, 18 (4.37%) identify as Black or African American, 2 (0.49%) identify as Native Hawaiian or other Pacific Islander, 306 (74.27%) identify as White, 18 (4.37%) identify as Multi Race (two or more above), and 10 (2.43%) chose not to respond.

Unduplicated, people who identify as Hispanic, Latino, or Spanish origins and/or Non-White or Multi Race made up 126 respondents, or 30.58%. Of these respondents, 71.4% were under age 55, 44.4% lived in households with children under 5, 42.8% lived in households with disabilities, and roughly 83.3% were female.

Wording of Questions and Scoring

On the question on the following slides denoted with "~" the full question when presented on the survey reads "Fixing unsafe living conditions such as a leaking roof, toxic mold, lack of heat, or pests".
This question was shortened in the tables to better use space and make the tables more viewer friendly.
All scores as shown on the following slides are the mean issue score for each group and issue.

These are ranked in order of issue of most concern for group listed in the title.

Additional Notes

The first table in the following pages is sorted in order of issues of most concern across all survey responses (412). Thereafter, the analyst included several subset tables sorted by these criteria: under 100% FPL, Age 55+, Under Age 55, Households with Children Under 5, Households with Disabilities, Male, Female, and by county.
Male and Female do not total 100% as 9 respondents chose not to share their gender identity. Under 55 and Over 55 also do not equal 100%, as 10 respondents chose not to share their age.
